1  #!/bin/bash
2
3  #=====
4  # Created by Kirstie Whitaker on 13th April 2016
5  #
6  # DESCRIPTION:
7  #   This code conducts a brain and head extraction of the PDw image to which
8  #   the quantitative multiparametric mapping (MPM) images have been aligned.
9  #   It then uses the head mask to set all voxels outside of the head to
10 #   zero for the quantitative MPM images and uses the brain mask to create
11 #   brain extracted versions of the MPM images (where all voxels outside of
12 #   the brain have been set to zero.
13 #
14 # USAGE:
15 #   NSPN_mpm_bet_mask.sh <pdw_file>
16 #
17 # INPUTS:
18 #   pdw_file : Proton density weighted file to which the MPM
19 #               quantitative maps are aligned.
20 #
21 # EXPECTS:
22 #   The following files should be in the same directory as the
23 #   input file:
24 #
25 #       R1.nii.gz      MT.nii.gz
26 #       R1s.nii.gz     A.nii.gz
27 #
28 # OUTPUTS:
29 #   All output are in the same directory as the input file.
30 #   A sub-directory called PDw_bet is created and contains all the
31 #   files created by FSL's bet command
32 #
33 #       R1_head.nii.gz   R1_brain.nii.gz

```

```

91
92 # Erode the brain mask by 3mm
93 if [[ ! -f ${mpm_dir}/PDw_brain_ero3.nii.gz ]]; then
94     fslmaths ${bet_dir}/PDw_brain.nii.gz -ero ${bet_dir}/PDw_brain_ero3.nii.gz
95 fi
96
97 #=====
98 # Now make the brain and head files for each of the
99 # calculated MPM files
100 #=====
101 echo -n " Applying masks"
102 for f_name in PDw ${calc_filename_list[@]}; do
103
104     # Don't run if it's already complete!
105     if [[ ! -f ${mpm_dir}/${f_name}_head.nii.gz ]]; then
106         echo -n " - ${f_name}"
107         fslmaths ${bet_dir}/PDw_brain_ero3.nii.gz \
108             -bin \
109             -mul ${mpm_dir}/${f_name}.nii.gz \
110             ${mpm_dir}/${f_name}_brain.nii.gz
111
112         fslmaths ${bet_dir}/PDw_brain_outskin_mask.nii.gz \
113             -bin \
114             -mul ${mpm_dir}/${f_name}.nii.gz \
115             ${mpm_dir}/${f_name}_head.nii.gz
116     fi
117 done # Close the mpm calculated file loop
118 echo ""
119
120 #=====
121 # All done!
122 #=====

```

statistics example code: errorbar_demo_features.py

(Source code, png, hires.png, pdf)

```
"""
Demo of errorbar function with different ways of specifying error bars.

Errors can be specified as a constant value (as shown in `errorbar_demo.py`),
or as demonstrated in this example, they can be specified by an N x 1 or 2 x N,
where N is the number of data points.

N x 1:
    Error varies for each point, but the error values are symmetric (i.e. the
    lower and upper values are equal).

2 x N:
    Error varies for each point, and the lower and upper limits (in that order)
    are different (asymmetric case)

In addition, this example demonstrates how to use Log scale with errorbar.
"""
import numpy as np
import matplotlib.pyplot as plt

# example data
x = np.arange(0.1, 4, 0.5)
y = np.exp(-x)
# example error bar values that vary with x-position
error = 0.1 + 0.2 * x
# error bar values w/ different +/- errors
lower_error = 0.4 * error
upper_error = error
asymmetric_error = [lower_error, upper_error]

fig, (ax0, ax1) = plt.subplots(nrows=2, sharex=True)
ax0.errorbar(x, y, yerr=error, fmt='o')
ax0.set_title('variable, symmetric error')

ax1.errorbar(x, y, xerr=asymmetric_error, fmt='o')
ax1.set_title('variable, asymmetric error')
ax1.set_yscale('log')
plt.show()

SIGNAL PROCESSING WITH GW150914 OPEN DATA

Welcome! This ipython notebook (or associated python script GW150914_tutorial.py) will go through some typical signal processing tasks on strain time-series data associated with the LIGO GW150914 data release from the LIGO Open Science Center (LOSC):

- <https://losc.ligo.org/events/GW150914/>
- View the tutorial as a web page - https://losc.ligo.org/s/events/GW150914/GW150914_tutorial.html
- Download the tutorial as a python script - https://losc.ligo.org/s/events/GW150914/GW150914_tutorial.py
- Download the tutorial as iPython Notebook - https://losc.ligo.org/s/events/GW150914/GW150914_tutorial.ipynb

To begin, download the ipython notebook, readligo.py, and the data files listed below. You can then run the python script GW150914_tutorial.py. You will need the python packages:

On Windows, or if you prefer, you can use a python development environment such as Anaconda (<https://www.anaconda.com/>) or Enthought Canopy (<https://www.enthought.com/products/canopy/>)

Questions, comments, suggestions, corrections, etc: email losc@ligo.org

v20160208b

```
In [6]: # plot +/- 5 seconds around the event:
tevent = 1126259462.422      # Mon Sep 14 09:50:45 GMT 2015
deltat = 5.                  # seconds around the event
# index into the strain time series for this time interval:
indxt = np.where((time_H1 >= tevent-deltat) & (time_H1 < tevent+deltat))

plt.figure()
plt.plot(time_H1[indxt]-tevent, strain_H1[indxt], 'r', label='H1 strain')
plt.plot(time_L1[indxt]-tevent, strain_L1[indxt], 'g', label='L1 strain')
plt.xlabel('time (s) since ' + str(tevent))
plt.ylabel('strain')
plt.legend(loc='lower right')
plt.title('Advanced LIGO strain data near GW150914')
plt.savefig('GW150914_strain.png')
```

ReproducibleResearch

This repository supports [Kirstie's](#) presentation on tips and tricks for making your research reproducible.

The goal is to build a directory of useful links, and a jargon busting glossary.

Guide for contributors

See our [guidelines](#) for how to contribute to the project.

Code of conduct

Everyone is welcome to join this project, particularly people who have not used GitHub before and are feeling unsure of how to begin!

Please follow our [code of conduct](#) in all your on and offline interactions.

Jargon Busting

If you remember not knowing what a word means, there's probably someone else who could benefit from you defining it here!

Please be brief in your description, but do link to further information as appropriate.

Help editing markdown can be found [here](#) and [here](#).

Useful Resources

If you know of a useful resource that has helped you make your research reproducible, please add it here.

Help editing markdown can be found at this excellent [markdown cheatsheet](#)

Git & GitHub

- [Friendly GitHub Introductiun](#): an afternoon workshop created originally by [Joey Lee](#) for the [Mozilla Science Lab](#) and further developed by [Kirstie Whitaker](#) and [Anne Pajon](#).
- [Get private GitHub repositories](#): a [paid GitHub account](#) allows you to have private repositories that only people you choose to make collaborators can see. If you're a member of an academic institution you can [request a discount](#) (to \$0) and therefore have free private repositories. The discount lasts for 2 years but you can request another at the end of that period no problem 🙌.
